Company Highlights

Owner's Message

“It still holds true that man is most uniquely human when he turns obstacles into opportunities.” — Eric Hoffer

I am proud to declare that the world's leading brand 'Otis' chose us as their exclusive distributor of elevators, moving walkways and escalators etc.

Emfore Corporation was established as a local counterpart to provide international Otis standard of installation and maintenance services to its customers in Pakistan. It is a dynamic organization and has a well composed technical complement including knowledgeable and competent engineers who have received extensive specialized training at Otis Works and have decades of experience in installation and maintenance of all kinds of lifts and escalators. Apart from training and troubleshooting assignments abroad, some of our engineers have also received training in lift technology in Schindler factories in Switzerland and Italy.

Qualifying our technical staff up to the best possible standards has always been our priority as they are the key source of providing our customers with exceptional services.

Emfore Corporation is the sole representative of OTIS ELEVATOR CO. in Pakistan since 1992. It has full regional outreach through its offices in Karachi, Lahore and Islamabad. It has a trained workforce that has incomparable expertise in installation and operation of not only OTIS's equipment but other famous brands like Schindler, Kone, Express, etc. The best complement to our expertise is that, while we are duly bound to provide maintenance services for Otis equipment, maintenance and installation of other brands of lifts being entrusted to us in preference over their local agents.

We have reached an unparalleled level of excellence providing our customers complete range of Otis products offered by the innovators. We dedicate our services in bringing our customers innovation, protection and satisfaction under their feet.

- Munawwar Husain
CEO & Director Technical

Employee's Messages

Working with Emfore Corporation is of great honour for me. I have worked in other renowned organizations but had to end up with a resignation due to lack of job security and job satisfaction. I am thrilled to experience such vast opportunities presented by this company.

- Majid Salam
GM / HOD Sales & Marketing

From a lift operator to a highly skilled technician, I have covered a substantial journey full of opportunities and developments offered to me by this company. My bosses acknowledged my abilities even when I was unaware of them. If it was not for their faith in me, I would have deprived my family with a healthy living standard.

- Majid Rasheed
Senior Engineer / HOD

The working environment at this company is quite admirable. I am glad to know that my skills are always put under the process as for the purpose of growth and development of the company.

- Zeeshan Noor
Manager Finance / Admin

Before joining Emfore Corporation, I have heard about the friendly working environment and efficient provision of services by this company. I have recently joined their team and now that I am part of it, I can testify every word that I have heard. It's all true.

- Azlan Ahmed Khan
Accountant

About OTIS

Otis Elevator Company has been safely and efficiently moving people for over 160 years. Today, Otis is the world's pioneering and the largest manufacturer of lifts, escalators and moving-walkways etc. With more than 2.2 million installations and around 70,000 employees, Otis can be found almost anywhere around the globe.

By creatively applying new technologies, Otis Elevator Company continues to set precedents for ride quality, reliability and safety throughout the industry. This spirit of innovation, combined with outstanding customer service, has earned Otis elevators a prominent place in 10 of the world's 20 tallest buildings.

OTIS at a Glance

- **People**

Approximately 70,000 employees, with 60,000 outside the United States

- **Revenue**

US \$12.9 billion in 2008, of which 80 percent was generated outside the United States

- **Installed Base**

Approximately 2.5 million Otis elevators and escalators in operation worldwide

- **Service Base**

1.6 million elevators and escalators serviced worldwide

- **Countries**

Products offered in more than 200 countries and territories

- **Manufacturing**

Major manufacturing facilities in the Americas, Europe and Asia

- **Engineering and Test Centers**

Engineering facilities in the United States, Austria, Brazil, China, Czech Republic, France, Germany, India, Italy, Japan, Korea and Spain

Once every nine days, Otis moves the population of the world.

Otis is the world's largest producer of elevators, escalators, moving walkways and other horizontal transportation systems.

Our annual sales exceed US\$2.9 billion.

Otis market share world-wide approaches 25 percent.

We produce more than 25,000 elevators, escalators and other system annually.

Otis has production facilities in 27 plants in 17 countries.

More than 600,000 elevators and escalators world-wide are under Otis service contracts.

We have the largest and best-trained service organisation in the world, we operate from 1,700 service locations.

Otis does business in 160 countries; 569 district and branch offices are grouped in four operations: North America, Latin America, Europe/Africa/Middle East and Asia-Pacific.

Our world-wide employment is 45,000, 34,795 are employed outside the USA.

Advanced engineering, research and development facilities are located in USA, Germany, France, Spain and Japan.

We are wholly owned subsidiary of United Technologies Corporation, which has US\$17 billion in annual sales. Other divisions of United Technologies include: Pratt & Whitney jet engines; Carrier air conditioning; Sikorsky helicopters; Hamilton Standard controls; Automotive; and Norden defense systems.

United Technologies Corporation employs 190,000 people around-the-world. It invests US\$879 million a year in research and development.

Firsts and Interesting Facts

Elisha Graves Otis invented the world's first "safety hoister" in 1852 and founded the Otis Elevator Company in 1853.

Using a steam power source, the first passenger elevator with 500 kg capacity and 0.20 metre-per-second speed was installed in the five-storey E.V. Haughwout store, New York City in 1857.

The first Otis Elevator in Russia was delivered in 1858.

The first elevator with an independent steam power source was installed in the Ball, Black and Company store in New York City in 1860.

Facts, Figures & Firsts. Facts, Figures & Firsts. Facts, Figures & Firsts. Facts, Figures & Firsts.

Brand News

United Technologies has received an “A” credit rating from analysts at [Morningstar](#). The investment research firm’s “A” rating indicates that the company is a low default risk.

United Technologies Corporation supplies high technology products and services to the building systems and aerospace businesses around the world. The Company operates through five segments: Otis; UTC Climate, Controls & Security; Pratt & Whitney; UTC Aerospace Systems and Sikorsky. Otis sells, designs, makes and installs a variety of freight and passenger elevators for low-, medium- and high speed programs, as well as a line of moving walkways and escalators.

"People are taught to drive a car or take flights safely, but no such classes are given on how to ride an escalator, even though we ride on every day," said Tony Black, president of Otis Elevator (Investment) Co Ltd, adding that many children or even grown-ups may not know how to use elevators in a right way.

To improve public awareness of and knowledge in riding escalators safely, Otis has developed a series of safety education campaigns nationwide since 2012, including publishing a safety book and rolling out Safe Rider Program under which Otis employees are mobilized to volunteer and teach escalator safety at their own communities.

Our Strategy

PURPOSE

To become a leader amongst the agents providing elevators and escalators while maintaining our enhanced services, relationships and profitability.

VISION

To provide quality services that exceeds the expectations of our esteemed customers.

MISSION STATEMENT

To build long term relationships with our customers and clients and provide exceptional customer services by pursuing business through innovation and advanced technology.

Core Values

- ❑ Customer Satisfaction: We believe in treating our customers with respect and are willing to move a step ahead to fulfill their demands.
- ❑ Development: We grow through creativity, invention and innovation.
- ❑ Integrity: We integrate honesty, integrity and business ethics into all aspects of our business functioning.
- ❑ Workplace Safety: We do not compromise with the safety of our staff, may it be the technical ones or an administrative employee.
- ❑ Teamwork: Co-ordination amongst our members is highly encourage in order to produce the best outcome possible.

Our Brands

We represent the following world's renowned companies in Pakistan:

☐ **OTIS:**

The world's largest manufacturer of lifts, escalators, moving walkways and horizontal transportation system etc.

☐ **The Express Lift Company Limited, England:**

The European leading manufacturer of lifts & escalator purchased by Otis Elevator Company in the year 1996.

☐ **LG Industrial Systems Company Limited:**

The leading Korean manufacturer of lifts, escalators and other related assets of LGIS' building facilities group acquired by Otis in Nov 1999.

☐ **Jetways Aerotech/Airways Engineering Associates:**

The world's foremost manufacturer of passenger boarding bridges and comprehensive range of airport equipment.

☐ **Modernfold, Inc., USA:**

The world's largest manufacturer of operable wall system & accordion products.

☐ **Technogym International B.V., Switzerland:**

The world's leading manufacturer of professional cardio-fitness equipment.

☐ **Calico Industries, Inc., USA:**

The world's largest manufacturer of food services, janitorial and safety supplies.

☐ **Josam Company, Indiana, USA:**

The world's largest manufacturer of plumbing & drainage products.

Products

Elevators

Gearless Traction Electric Elevators

In 1903, Otis introduced the design that would become the standard in the elevator industry. The gearless traction electric elevator could be employed in buildings of any height and operated at much higher speeds than steam-powered elevators.

This design has proven so durable that even now, when a building is modernized—while the elevator control system is replaced with the most up-to-date electronics—it is rarely necessary to replace a well maintained gearless machine.

Geared Traction Elevators

As the name implies, the electric motor in this design drives a worm and gear-type reduction unit, which turns the hoisting sheave. While the lift rates are slower than in a typical gearless elevator, the gear reduction offers the advantage of requiring a less powerful motor to turn the sheave. These elevators typically operate at speeds from 38 to 152 meters (125-500 ft) per minute and carry loads of up to 13,600 kilograms (30,000 lb). An electrically controlled brake between the motor and the reduction unit stops the elevator, holding the car at the desired floor level.

Hydraulic Elevators

Hydraulic elevators are used extensively in buildings up to five or six stories high. These elevators—which can operate at speeds up to 46 meters (150 ft) per minute—do not use the large overhead hoisting machinery the way geared and gearless systems do. Instead, a typical hydraulic elevator is powered by a piston that travels inside a cylinder. An electric motor pumps oil into the cylinder to move the piston. The piston smoothly lifts the elevator cab. Electrical valves control the release of the oil for a gentle descent.

Double Deck Elevators

Double-deck elevators save time and space in high-occupancy buildings by mounting one car upon another. One car stops at even floors and the other stops at the odd floors. Depending on their destination, passengers can mount one car in the lobby or take an escalator to a landing for the alternate car.

Observation Elevators

The observation elevator puts the cab on the outside of the building.

Glass-walled elevator cars allow passengers to view the cityscape or the building's atrium as they travel. By eliminating the hoist ways, the observation elevator also offers owners, architects and builders valuable space-saving advantages.

Freight Elevators

These elevators are specially constructed to withstand the rigors of heavy loads. Standard capacities range from 1360 kilograms (3000 lb) up to 5440 kilograms (12,000 lb). These elevators are rated according to load categories, with Class “A” being for hand trucks, Class “B” for carrying automobiles and Class “C1” for elevators with the capacity to carry a commercial truck.

Residential Elevators

Residential elevators use modern hydraulics to produce a smooth, quiet ride while occupying a minimum amount of space. These hydraulic systems are quiet, producing about the same amount of sound as a typical refrigerator, which makes them well suited for residential use. They can be operated at any hour without causing disturbance. The compact design allows the elevator to be installed in the amount of space required for an average-sized closet.

The GeN2 Family

GeN2 Regen

GeN2-Regen regenerating elevator adopts the most advanced elevator double energy-saving technology - Otis global regenerating technology. GeN2-Regen regenerating converter can transform the potential energy into electricity, providing the clean and pollutant-free electric power that meets the national electric standard to other users in the grid, realizing the regeneration of energy. Accompanied by the two energy-saving technologies of permanent magnet gearless tracking technology, the comprehensive energy saving can reach over 50%, and maximally 70%. It has been approved unanimously by experts to be “taking a lead in international energy saving”.

Green Technology - Standard

All Gen2 elevators include ReGen® regenerative drives, LED lighting and sleep mode for elevator lights and fans.

Smoothest Ride

The Gen2 system's coated steel belts provide a remarkably smooth ride with noticeably less vibration and noise.

Minimal Jobsite Coordination

No need to build a machine room reduces coordination with other trades and lessens impact on construction schedules.

Proven Reliability

Otis optimizes equipment performance throughout each product's lifecycle and has industry-leading service that only Otis can provide.

GeN2 Switch

The Otis GeN2 Switch is an environment-friendly, machine-room less elevator with unsurpassed levels of comfort, reliability and safety. It uses an exclusive system of flat, polyurethane-coated steel belts, a technology invented and patented by OTIS.

It is highly efficient and functional elevator, ideally suited for residential buildings, especially those that were built without an elevator. No specific electrical installation is required; you just plug it in like any electrical appliance in the building. With the OTIS GeN2 Switch is "plug and go". Furthermore, the OTIS GeN2 Switch incorporates a system of accumulators that allows the elevator to continue working in the normal way for an extended period of time in the event of a power failure.

GeN2 Premiere

Otis' GeN2®Premier2 system is the elevator reimagined to its very core. The GeN2® combines the latest technologies and materials to achieve 21st century objectives: energy efficiency, environmental responsibility, passenger safety, increased usable space, time-saving installation and design flexibility.

Original Hoisting Technology:

The hallmark of the GeN2® is its entirely original hoisting technology - lightweight, flexible reinforced steel belts, enveloped in a tough polyurethane jacket that improves traction and requires no lubrication.

These coated steel belts are quieter, 20 per cent lighter and have a life span two to three times longer than conventional ropes. Yet their superior flexibility allows the belts to bend around smaller diameter sheaves, resulting in more efficient transfer of power from the machine to the car. Flat belts also have more surface area at the point of contact, which significantly reduces noise and wear on the sheave.

GeN2 Flex

The machine-room less elevator with unsurpassed levels of comfort, reliability, safety, and respect for the environment.

Benefits of the Otis Gen2 Flex System:

- Using flat, polyurethane-coated steel belts in place of conventional wire ropes ensures smooth, quiet performance.
- The gearless machine and the variable frequency drive provide an exceptionally comfortable ride and outstanding stopping accuracy.
- Reduced operating costs.
- Both the belts and the machine with sealed-for-life bearings and lubrication-free, thus contributing to environmental protection.
- The flat belts make it possible to use a more compact machine, thereby eliminating the need for a machine room and reducing building costs.
- The PULSE system, parented by Otis, continuously monitors the status of the steel cords of the belts 24 hours a day, 7 days a week.
- As the machine is located on the rails, loads are transferred to the pit,

GeN2™ Flex. Dynamic solutions for the installation of new lifts in existing buildings.

GeN2 Lux

The GeN2®Lux elevator system offers the quality ride of the original GeN2®System with added high-speed capacity. The energy-efficient gearless permanent magnet (PM) machine is isolated and in its own Machine Room Compartment (MRC) to provide an exceptionally quiet and comfortable ride.

Less Intrusive Servicing:

The Machine Room Compartment (MRC) sits on a non-structural concrete slab, which acts as a noise, and heat barrier, making the elevator ride exceptionally quiet and comfortable for tenants.

GeN2 Comfort

Otis is proud to introduce the breakthrough Gen2™ COMFORT system—a re-invention of core elevator technology. The Gen2 COMFORT system combines modern technologies and materials with 21st century objectives such as energy efficiency, environmental responsibility, passenger safety and comfort, increased usable space, streamlined architectural profiles and time saving installation.

At the system's core is a coated steel belt – the first major advance in lifting technology in over 150 years. Combined with the equally innovative concept of smaller, energy saving machines, and the low noise controller and drive, this radical innovation produces a state of the art elevator system. The Gen2 COMFORT system represents more than a collection of new components. A reinvention of the most basic assumptions governing vertical transportation, it takes the elevator to its next evolutionary level.

Escalators

Otis being a constant companion in meeting the demands of its customers realized the need of escalators in the lives of people to reduce the strain caused by climbing the stairs.

- **Environmentally Friendly**

An electronic power monitoring system controls the escalator's motor torque based on load. Sensors installed at each landing compute the number of passengers at any given time and signal the power system to adjust torque output accordingly. Whenever the escalator is carrying less than its rated load, the system applies less torque, resulting in an overall reduction in energy use.

- **Minimal Lubrication**

A highly-efficient automatic lubrication system maintains proper lubrication to all vital components while utilizing up to 98% less oil than conventional systems.

- **Proven Reliability**

Otis' goal is to ensure that the installation with average passenger traffic load achieves a lifetime of at least 20 years without major overhaul. At all production stages, rigorous assembly controls are implemented which compare each operation against a strict tolerance. And before each system is shipped, it undergoes a series of final quality tests unique to Otis.

- **Accent on Aesthetics**

Modern aesthetic options allow the escalators to fit into the design needs of your building. Our finish and LED lighting options exceed the most discerning color and texture requirements.

- **Safety**

The Otis Escalator embodies a host of safety features making it probably the safest escalator yet designed. There are special deflectors which prevent objects from being trapped in the handrail entry box. Step rigidity is assured through the one-piece, die-cast aluminum step.

Moving Walkways

Another addition to the list of innovations are the moving walkways series. We know that your safety is in our hands therefore the most essential feature of moving walks has been given the highest priority:

The Anti-Slip grooves on pallet surface have an excellent slip-proof function which makes the ride safe and comfortable.

Slightly inclined combs can make trolleys OTIS easily get on and off. special machine with complete protecting drives function runs smoothly and efficiently.

Advance micro compressor controlling system can fully monitor the moving walks' performance, promptly eliminating running hazardous and reducing maintenance time.

Travolators

Easy living encouraged Otis manufacturers to give its customers a smooth ride against the stair -case, travolators brings a whole new experience to the world of technology:

Based on the advance technology introduced and absorbed from OTIS, it has developed product series of travolators especially for supermarkets, malls, etc.

- **Standard Features:**

- Satin stainless-steel decking
- Clear glass balustrade
- Black handrail
- One-piece, die-cast aluminum pallets
- Satin stainless steel skirt panels
- Single-radius newels
- Automatic lubrication system

- **Optional Features**

- Decking: bronze, silver gray powder-coated, or aluminum (silver, gold or steel finish)

Subject Maintenance of Our Elevator

This refers to our discussions with you today regarding our problems that we are facing with the existing lift.

We have one Hyundai brand elevator installed in our DFID Building in the British High Commission Compound (10 person capacity unit). The after sales service is deplorable and we are totally dissatisfied with M/s Islamabad Industrial. After thorough market scouring we found your organization and would like you to undertake the maintenance of this elevator immediately on rescue basis. It is mutually agreed that you will Otisize this unit when it is imperative to do so as there are no diagrams or technical documents available with us at a reasonable cost which will be paid by DFID for smooth and faultless running in future.

Thanks

Imran Butt

17th January, 2000.

Mr. Muhammad Hussain
Lift Engineer,
M/s. Emfore Corporation,
C-107/1, Block-4
K.A.E.C.H.S
KARACHI.

Dear Mr. Hussain,

I take this opportunity of thanking you for the excellent work done on the installation of OTIS Brand Lifts at the under-construction 11.11. Sheikh Khalifa Bin Zayed Al-Nahyan Medical Complex , Quetta. I particularly compliment you on the quality of leadership which you displayed by your personal involvement in every aspect of installation while not shying - away from working with your own hands as required by the exigencies of situation. I wish every young man in our beloved country to manifest the same spirit which would no doubt ensure a proud place for us in the comity of nations sooner than later.

I wish you every success in you future endeavors and career.

With regards,

Yours sincerely

(JAVED RAHIM)

Mr. Munawwar Hussain,
Emfore Corporation,
C-104/1, Block 4,
KAECH, Society,
Karachi.

NIC Building, Karachi
Maintenance of Lifts.

Dear Sir,

Please refer to your discussion of September 5, 1995 with our Executive Director Brig. (R) Rauf Ahmad Khwaja, the performance of lifts installed in our building have not been to the requirement of occupants as far as regular maintenance and smooth working is concerned.

As you have received training in lift technology at Schindler factories and have also been involved with installation of our lifts, we request you to please inspect them and let us have the proposal for their rectification and maintenance.

Any other suggestions which you may like for improvement for better operation

Yours faithfully,

S. ZAHID HUSSAIN
DY. MANAGER (BLDG)
